MAGNETIC LEVEL INDICATORS

3 YEARS WARRANTY @ NIVELCO – WHERE ELSE?

NIVELCO

LEVEL INDICATOR

NIVOFLIP BYPASS LIQUID LEVEL INDICATORS

MAIN FEATURES

- Clearly visible indicator
- Measuring range: 500-5500 mm (1.65 – 18 ft)
- $\pm 10 \text{ mm}$ (0.4 inch) accuracy
- Max. 100 bar g (1440 psi g) process pressure
- High temperature version
- Optional level switches
- Optional magnetostrictive level transmitter
- PED approval

GENERAL DESCRIPTION

The NIVOFLIP is a magnetic level indicator for pressurized vessels with up to 5.5 m (18 ft) flange distance containing liquids. The device has the international PED (Pressure Equipment Directive) approval, so it can be used for level indication of pressurized vessels up to 100 bar g (1440 psi g) process pressure. The high temperature types are applicable up to 250 °C (482 °F) process temperature. The NIVOFLIP can be equipped with optional limit switches or with NIVELCO's NIVOTRACK high-precision magnetostrictive level transmitter if point-level detection or continuous level transmission is required.

OPERATION

The welded bypass chamber that is the body of the indicator and the tank form one pressurized system. Mounted on suitable connection flanges located on the side of the tank the liquid level in the bypass tube and the tank is equal. A float in the bypass tube incorporating a polarized magnet tracks the level of the liquid. The bi-coloured magnetic flaps mounted on the tube composing a bar are serving as visual indicators by changing their colour as the float passes. The rotated flaps represent the actual level. The lower 100 mm (4 inch) of the bottom section of the indicating bar has different colour providing for an visual error signal in case the liquid level drops below the lower connection point of the instrument.

NIVOFLIP LEVEL INDICATOR SYSTEM

The NIVOFLIP bypass liquid level indicator can be equipped with MAK-100-□ external level switches and this way it can provide limit level indication. In case of using MAK-100 level switch the minimal medium density should be 0.1 kg/dm³ (100 oz/ft³) more than the specified. When the provided accuracy of the magnetic flaps is not enough, the high-precision NIVOTRACK M□L-500/600 series magnetostrictive level transmitters are recommended to use. Equipped with the OIML R85 approved NIVOTRACK the measurement system is suitable for custody transfer measurements. The magnetostrictive level transmitter has rigid probe in accordance to the length of the center to center distance of the connection flanges. The unit without float and process connection can be mounted externally by clamps to the bypass chamber. All the optional units are operated by the special designed float via magnetic coupling, there is no direct contact with the measured medium.

APPLICATIONS

- Oil and gas industries
- Chemical industry
- Power generation
- Boilers
- Pressurized vessels
- Tanks

MAK-100 MAGNETIC LEVEL SWITCHES

GENERAL DESCRIPTION

The MAK-100 type magnetic level switches are optional accessories for NIVOFLIP bypass level indicators. In the stainless steel bypass tube the float of NIVOFLIP tracks the liquid level. The float (incorporating a permanent magnet) operates the freely positioned MAK-100 level switch via magnetic coupling and provides non-contact signal transfer to the microswitch. There should be at least 100 mm (4 inch) distance between two switching points.

TEMPERATURE DATA FOR EX CERTIFIED MODELS

TEMPERATURE CLASSES		
Classes	Max. medium temp.	Max. ambient temp.
T6	+80 °C (+176 °F)	-20 ... +60 °C (-4 ... +140 °F)
T5	+95 °C (+203 °F)	-20 ... +70 °C (-4 ... +158 °F)
T4	+130 °C (+266 °F)	-20 ... +80 °C (-4 ... +176 °F)

TECHNICAL DATA

Type	MAK-100-0	MAK-100-6
Medium temperature	max.: 130°C	see: temperature classes table

NIVOTRACK MAGNETOSTRICTIVE LEVEL TRANSMITTERS

GENERAL DESCRIPTION

NIVOTRACK magnetostrictive level transmitters are an ideal solution for high accuracy measurement of liquids. Its high precision renders the NIVOTRACK suitable even for custody transfer measurement of liquids such as fuels, solvents, alcohol derivatives etc. When ordered together with NIVOFLIP Magnetic Level Indicator the magnetostrictive transmitters are factory calibrated to the bypass tube and the magnetic float. The transmitter is fixed with pipe clamps and aluminium spacers.

TECHNICAL DATA

Type	NIVOTRACK M \square L-500/600	
Measured process value	liquid level, distance, volume	
Probe length	In accordance to the center to center distance of NIVOFLIP +300 / 400 mm (12 / 15.75") in accordance to the float type	
Material of the probe	1.4571 (316 Ti) stainless steel	
Resolution	0.1 or 1 mm (0.004 or 0.04 inch) – as per selected type	
Linearity with dry calibration	± 0.25 or ± 1 mm (± 0.01 or ± 0.04 inch) – as per selected type	
Zero span	Anywhere within the active range	
Ambient temperature (1)	–40 °C ... +90 °C (-40 °F ... +194 °F), plastic housing: –25 °C ... +90 °C (-13 °F ... +194 °F), with display: –25 °C ... +90 °C (-13 °F ... +194 °F), Ex type: see temperature diagram	
Output	Analogue	4–20 mA
	Digital	4–20 mA + HART
	Display	SAP-300 graphic display
Damping time	0 s ... 99 s	
Error indication	22 mA or 3.8 mA or holding	
Power supply	12.5 V ... 36 V DC	
Electrical protection	Class III.	
Ingress protection	IP67	
Electrical connection	2x M20x1.5 plastic cable glands 6...12 mm (0.25 ... 0.5") cable + 2x NPT 1/2" internal thread for cable protective pipe terminal block for 0.5...1.5 mm ² (AWG 20 ... AWG 15) wire cross section Ex type: see „Special data for Ex certified models“ table	
Housing	Paint coated aluminium or plastic (PBT)	
Mass	1.7 kg (3.75 lb) + m. probe: 0.6 kg/m (0.4 lb/ft)	

(1) When mounted on NIVOFLIP bypass chamber

Vertical and horizontal display position is offered for optimal mounting in your application.

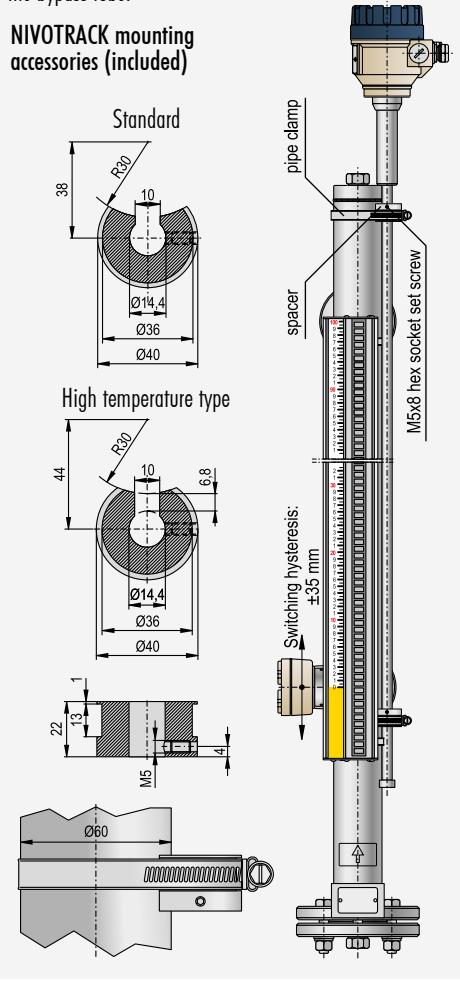

DIMENSIONS

NIVOTRACK MOUNTED ON NIVOFLIP

The probe length of the magnetostrictive level transmitter should be 300 / 400 mm (11.8 / 15.75 inch) longer than the center to center distance of the bypass tube in accordance to the float type. The level transmitter is placed onto the bypass tube that the top of the magnetostrictive probe is in the same height with the top of the bypass tube. The end of the probe should extend the inverse polarized error indication flaps with 20 / 40 mm (0.75 / 1.5 inch). The supplied aluminium spacers are fixed with hex socket set screws and they are mounted to the bypass tube with pipe clamps. In case of the high temperature type there is a ceramic fiber insulation blanket between the magnetostrictive probe and the bypass tube.
